

```
company <- importData("c:\\temp\\company.sav")
wsci(company[,2:5])
```

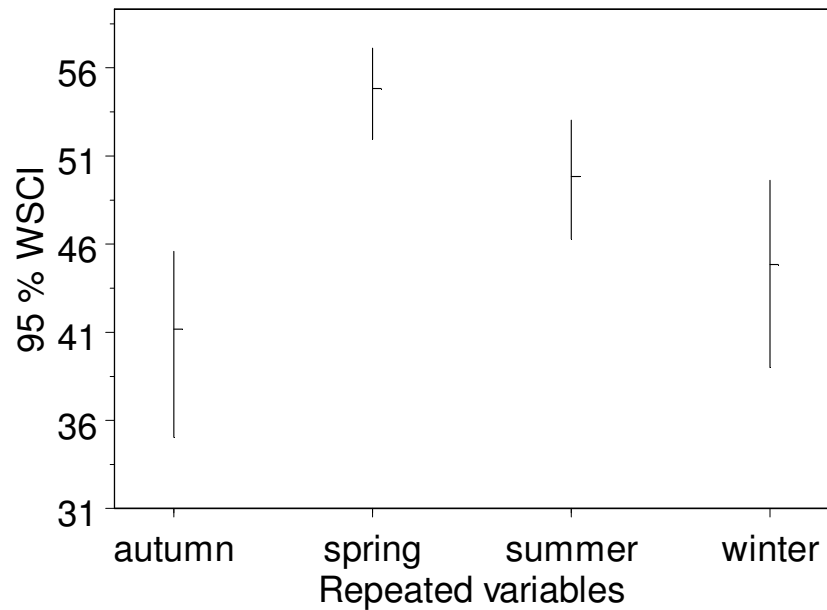

produces ->

That is the default values (standard method, 95% level).
The following command changes to 80% and BCa intervals.

```
wsci(company[,2:5],meth=1,ci=80)
```

produces ->

The output from both procedures includes the means and bounds of the interval.
