Overview:
The role of the environmental engineer is to protect public health and safety from the adverse effects of pollution and to ensure that nature's ecosystems are not adversely affected as they are used to benefit man. This course introduces students to environmental problems and their resolution including water and wastewater treatment, air pollution and control, and solid and hazardous waste management. A significant portion of the course is devoted to a review of general and physical chemistry. The associated laboratory class ENV 3001L illustrates several analytical techniques commonly used in the analysis of environmental samples, and demonstrates the mechanisms involved in some of the treatment processes.

Catalog Course Description:
Introduction to environmental engineering problems; water and wastewater treatment, air pollution, noise, solid and hazardous wastes.

Prerequisites:
CHM 1046 and CHM 1046L, PHY 2049, MAC 2312 and permission of undergraduate advisor.

Corequisite:
ENV 3001L Environmental Laboratory

Instructor:
Dr. Shonali Laha, P.E.
Office Location: EC 3742
Phone: 305-348-1092
Fax: 305-348-2802
Email: lahas@fiu.edu
Office hours: Tuesdays 1400 – 1600, Thursdays 1400 – 1700, and by appointment.

Location and Timing:
Room: EC 1105
Tuesdays and Thursdays 9:30 – 10:45

Final Examination:
Week of December 7 – 12, 2009

Textbook:
Excellent Science Reading:

Useful Reference Books:

Exit Competencies:
After successful completion of this course students should be able to:
1. Articulate the role of the environmental engineer in protecting public health and safety, and in restoring/preserving natural resources
2. Understand the relevance of concepts in general and physical chemistry in determining the quality and treatment options for water supplies, wastewater, and air pollution
3. Apply mass balance, chemical kinetics, and other empirical and semi-empirical concepts and techniques in developing basic treatment schemes.
4. Gain familiarity with both the traditional and the less common environmental contaminants
5. Identify unit operations/processes likely to be successful at eliminating these contaminants.

Grading Criteria:
The final grade will be based on the following criteria totaling 100 points:

- Midterm Exams: 45 points
- Final Exam: 35 points
- Homework/class participation: 20 points
- Extra credit for field trips: maximum 10 points

General Observations/Policies:
The class meets twice a week for an hour and fifteen minutes. I appreciate punctuality and will penalize tardiness, especially in view of the short class time. The environmental laboratory class (ENV 3001L) is scheduled for later in the evenings, and although I am not listed as the lab instructor, the material covered in the lab sections will emphasize much of the chemistry in the theoretical sessions, and I will try to stop by in the labs occasionally to ensure that you are following the theory behind the lab exercises.

I cannot tolerate cell phones and beepers ringing during class hours. Please turn off the ringers as a courtesy to your fellow classmates and me – I will certainly penalize violators of this principle in their grade assignment.

Finally, I generally like to take the class for field trips to Miami-Dade County facilities such as the solid waste facility, the water and wastewater treatment plants, the Everglades National Park, etc. I believe such trips are very beneficial to your learning but do expect class participation, if not enthusiasm!

Also review the “University Misconduct Statement” attached after the “Tentative Class Schedule”.

University Misconduct Statement

Florida International University is a community dedicated to generating and imparting knowledge through excellent teaching and research, the rigorous and respectful exchange of ideas, and community service. All students should respect the right of others to have an equitable opportunity to learn and honestly demonstrate the quality of their learning. Therefore, all students are expected to adhere to a standard of academic conduct, which demonstrates respect for themselves, their fellow students, and the educational mission of the University. All students are deemed by the University to understand that if they are found responsible for academic misconduct, they will be subject to the Academic Misconduct procedures and sanctions, as outlined in the Student Handbook.

Misconduct includes: Cheating – The unauthorized use of books, notes, aids, electronic sources; or assistance from another person with respect to examinations, course assignments, field service reports, class recitations; or the unauthorized possession of examination papers or course materials, whether originally authorized or not. Plagiarism – The use and appropriation of another’s work without any indication of the source and the representation of such work as the student’s own. Any student who fails to give credit for ideas, expressions or materials taken from another source, including internet sources, is responsible for plagiarism.

In addition to this specific University Misconduct Statement, I expect students to demonstrate courtesy to their peers and to me in the classroom. This includes turning off cell phones during class hours, not talking amongst yourself and disrupting the class, etc. While attendance in lectures is not mandatory, I believe that you can learn quite a bit through attending class. Similarly, while you may work in groups on assignments, I hope that you will each individually strive to understand how to solve each assignment problem since that is essential to your overall class understanding and your performance in tests. Tests are of course an individual performance assessment and there can be no collaboration or joint efforts in tests!
ABET-related Objectives & Outcomes

This course accomplishes, to various extents, the following ABET-related objectives and outcomes:

Objective 1 - Technical Proficiency: Our graduates will have the ability to:

3a. **Apply knowledge of mathematics, science, and engineering to solve civil engineering problems;**
3b. Design and conduct experiments, and analyze and interpret data related to at least one of the technical areas encompassed by civil engineering (i.e., structural, geotechnical, transportation, environmental and water resources engineering, construction, and general/comprehensive);
3c. Design a system, component, or process to meet desired needs related to at least one of the technical areas encompassed by civil engineering;
3e. **Identify, formulate, and solve civil engineering problems;**
3k. **Utilize the techniques, skills, and modern scientific and engineering tools necessary for civil engineering practice.**

Objective 2 - Communication: Our graduates will have an acceptable level of proficiency in:

3d. Working with others as part of multi-disciplinary teams;
3g. **Written, oral, and graphical communication.**

Objective 3 – Responsible Citizenship: Our graduates will have an acceptable level of appreciation for and understanding of:

3h. **The impact of engineering solutions in a global and societal context;**
3j. Contemporary issues facing society as a whole.

Objective 4 – Lifelong Learning: Our graduates will:

3i.1. Recognize that graduation is a first step in their development of professional engineering competency;
3i.2. Recognize the need for lifelong learning to maintain and enhance their professional practice of civil engineering.

Objective 5 – Ethical Behavior: Our graduates will:

3f. **Have an understanding of professional and ethical responsibility.**

The outcome identifiers, herein used (e.g., “3h”), correspond to the same calling system that is used in the ABET Criteria for Accrediting Engineering Programs (www.abet.org).

Specifically, for ENV 3001 the following objectives and outcomes are addressed: 3a, 3e, 3k, 3g, 3h, and 3f; and to a lesser extent 3i.
