

The Department of Psychology

Presents

Colloquia Series

Speaker: ***Kelly Snyder***

Topic: Neural Mechanisms of Infant Memory
 Development

Date: Friday February 12, 2010

Time: 11:30AM-1:00PM

Location: FIU Modesto Maidique Campus DM140

Dr. Kelly Snyder is currently an Assistant Professor in the Department of Psychology at the University of Denver. She received her Ph.D. in Child Development with a minor in Neuroscience from the Institute of Child Development, University of Minnesota in 2003. Her research examines the mechanisms underlying memory development in infants and children using a combination of behavioral methods (e.g., eye tracking, preferential-looking) and high-density electrophysiology (EEG and event-related potentials-ERPs). She has a particular emphasis on the functional development of the hippocampal memory system supporting declarative (explicit) memory, and the roles that attention, motivation, and emotion play in early learning.

All are invited to attend
