

FORMULAS TEST 2

$$\bar{x} = \frac{\sum x_i}{n}$$

$$s = \sqrt{\frac{\sum (x_i - \bar{x})^2}{n - 1}}$$

$$z = \frac{x - \mathbf{m}}{\mathbf{S}}$$

$$X = \mathbf{n} + z\mathbf{S}$$

$$z = \frac{\bar{x} - \mathbf{m}}{\mathbf{S} / \sqrt{n}}$$

$$\bar{X} = \mathbf{m} + z(\mathbf{S} / \sqrt{n})$$

$$\text{MedianRank} = \frac{n+1}{2}$$

$$\text{QuartileRank} = \frac{[\text{MedianRank}] + 1}{2}$$

$$IQR = Q3 - Q1 \quad \text{InnerFences} = Q \pm 1.5 * IQR \quad \text{OuterFences} = Q \pm 3 * IQR$$

Probability Laws

$$P(\mathbf{A} \text{ or } \mathbf{B}) = P(\mathbf{A}) + P(\mathbf{B}) \quad \text{if } \mathbf{A} \text{ and } \mathbf{B} \text{ are disjoint}$$

$$P(\mathbf{A} \text{ and } \mathbf{B}) = P(\mathbf{A}) \times P(\mathbf{B} | \mathbf{A})$$

$$P(\mathbf{B} | \mathbf{A}) = P(\mathbf{A} \text{ and } \mathbf{B}) / P(\mathbf{A}) \quad \text{if } P(\mathbf{A}) \neq 0$$

$$\text{If } \mathbf{A} \text{ and } \mathbf{B} \text{ are statistically independent, } P(\mathbf{A} \text{ and } \mathbf{B}) = P(\mathbf{A}) \times P(\mathbf{B})$$

Confidence Interval and Sample Size Determination for μ

$$\bar{X} \pm z^*(\mathbf{S} / \sqrt{n}) \quad n = \left(\frac{z^* \mathbf{S}}{m} \right)^2 \quad \text{where } m = \text{margin of error}$$
