Coding your Web Page "by Hand"
Using Notepad

Adding color to your web page.

An index to the color codes is as follows:

- **Background colors:**
  - bgcolor: refers to the background color
  - background: allows you to wallpaper the background
    
    Use: background="http://www.fiu.edu/~charlyne/images/wood.jpg"

- **text:** refers to the color of the text
- **link:** refers to the color of the links before being visited
- **vlink:** refers to the color of the links after they have been visited
- **alink:** refers to the color of the active links at the MOMENT of activation

For some RGB colors you can look at
Lindsay's color swatches (http://catless.ncl.ac.uk/Lindsay/swatch0.html)

---

This is a level one heading.

This is a level two heading.

This is a level three heading.

This is a level four heading.

This is a level five heading.

This is a level six heading.

- This will bold text.
- *This will italicize text.*

---

Use an ordered list to show the font sizes:

1. This is the first font size.
2. This is the second font size.
3. This is the third font size.
4. This is the fourth font size.
5. This is the fifth font size.
6. This is the sixth font size.
7. This is the seventh font size.

<table>
<thead>
<tr>
<th>one</th>
<th>two</th>
<th>three</th>
</tr>
</thead>
<tbody>
<tr>
<td>four</td>
<td>five</td>
<td>six</td>
</tr>
<tr>
<td>seven</td>
<td>eight</td>
<td>nine</td>
</tr>
<tr>
<td>ten</td>
<td>eleven</td>
<td>twelve</td>
</tr>
</tbody>
</table>

If you want someone to write you at your e-mail account, you can insert the code into your document with anchors around the text denoting your link.
