

Florida International University
Department of Earth and Environment

GLY 5495 Spring 11

Topics in Geophysics: Environmental and Exploration Geophysics

Lec: MWF 1:00-1:50, PC311

Note: This syllabus supersedes all previous versions (11/9/10)

Dr. Dean Whitman
Office Hours: M: 2:30-4:00PM
after class, or by appointment

PC 325A, Tel: 348-3089
E-mail: whitmand@fiu.edu

Required Text: Burger, H. R., A. F. Sheehan, and C. H. Jones *Introduction to Applied Geophysics, Exploring the Shallow Subsurface*, 2005. ISBN 0-393-92637

Grading: Exercises 35%; Term project 15%, Midterm 20%; Final 30%

Description:

Geophysics is the application of physical principles to the study of the Earth's structure and physical properties. Exploration or applied geophysical techniques are used to determine the physical properties of the subsurface from measurements made by instrumentation placed on the surface or in boreholes in the ground. These techniques were first developed as an aid in the exploration for mineral and petroleum deposits but in recent years, they have been increasingly applied to environmental problems such as hydrogeology and site remediation. Applications of geophysical methods include the determination of subsurface stratigraphy and soil properties, characterization of groundwater flow and storage, the identification and tracing of hazardous substances and contaminants in the subsurface, the detection of buried objects and unexploded ordinance, the characterization of soil and bedrock properties for stability, and the exploration of the subsurface for valuable mineral and energy resources.

Learning Objectives/Outcomes

This course will provide an introduction to the basic field and interpretation methods used in exploration and environmental geophysics. Topics include introductory surveying and GPS, seismic methods, potential fields, electrical methods, ground penetrating radar (GPR), borehole methods. The course includes 3-4 field trips to sites in Miami-Dade County and will also include exercises on data reduction, modeling, interpretation, and computerized map production. The field exercises are an essential part of this course and are **required** for all students.

This course is cross listed with an undergraduate course, GLY 4450. While GLY 5495 will cover the same topics, graduate students registered for GLY 5495 will be given different exams, that will require a more in-depth understanding of the materials. In addition, students registered for GLY 5495 will be expected to complete a term paper and to present a report to the class.

Tentative Schedule

Week	Topic	Reading
1	Introduction Seismic Waves Ex1: Field surveying; GPS	Ch 1, Ch 2
2	Seismic wave propagation Ex2: Data reduction/ Intro to GIS Ex	Ch 2, Ch 3
3	Seismic refraction method Ex 3: Seismic Refraction Method	Ch 3
4	Seismic reflection method Ex 4: Seismic Reflection Method	Ch 4
5	Seismic Surveying Ex 5: Seismic Field Survey	Ch 4
6	Midterm (Seismic Methods, Chs. 1 - 4) Gravity on the Earth Ex 6 Vertical Gravity Gradient, Field survey	Ch 6
7	Gravity surveying and reduction Regional gravity studies and anomalies Ex 7: Gravity Mapping and Interpretation	Ch 6
8	Gravity Anomalies Due to Simple Shapes 2-D Gravity Anomalies Ex 8: Gravity Modeling	Ch 6
9	Earth Magnetism Magnetic surveying Ex 9: Magnetic & EM Field survey	Ch 7
10	Spring Break	
11	Magnetic Anomalies Ex 10: Magnetic modeling	Ch 7
12	Electrical resistivity Lab 11: DC Resistivity Field Survey	Ch 5
13	Electromagnetic methods Lab 12: Resistivity Modeling and Interpretation	Ch 8
14	Ground Penetration Radar Lab 13: GPR interpretation	Ch 8
15	Borehole Methods Review and Questions
